### Standards that were met with areas for improvement

#### Standard 1.2

- The pharmacy has a process to record mistakes that occur and centrally review potential learning opportunities. But it does not allow specific learning points to be identified, which would help to reduce the risk of similar mistakes happening again.

#### Standard 1.6

- The pharmacy largely keeps the required records in line with requirements. But records for its higher-risk medicines are not always kept up to date. And records for fridge temperatures and unlicensed specials are kept off-site. So the team may not be able to easily refer to these records in the event of a query or a concern.

## **Standard 4.2**

- The pharmacy team members speak to people who use their services. But they do not routinely speak to those taking higher risk medicines, or record the counselling advice they provide. This would help to ensure continuity of care and make sure up-to-date information is available during clinical reviews.
