Standards not met

Standard 1.6

- The pharmacy does not always maintain complete and accurate records. It has not correctly recorded or investigated several inaccurate stock balances for its higher risk medicines in a timely manner. And for private prescription supply records, it regularly does not record full or correct details of the prescriber. The responsible pharmacist record has many missing entries of when the pharmacist duties ceased at the end of the working day. This makes it more difficult for the

pharmacy team to resolve queries and identify errors.

Standard 4.4

- The pharmacy does not have a robust process for actioning Medicines Healthcare and Products Regulatory Agency (MHRA) patient safety alerts and medicines recalls. It has gaps in its records for several months. So, the pharmacy cannot be sure it receives and actions all recalls to ensure medicines are safe to use and fit to supply.
