Standards not met

Standard 4.3

- The pharmacy team access the controlled drug cabinets and dispense medicines when the responsible pharmacist isn't at the pharmacy. The pharmacy cannot show that all its medicines it needs to keep in a refrigerator have been stored at the right temperature.

Standards that were met with areas for improvement

Standard 1.3

- Members of the pharmacy team don't always fully understand what they can and cannot do when a pharmacist isn't present at the pharmacy. This means the pharmacy could operate unlawfully.

Standard 1.6

- The pharmacy generally maintains appropriate records as required by law. However, some records, such as the responsible pharmacist log, private prescription register, and emergency supply records, contain missing or inaccurate information. This affects the reliability of the records and could make it harder for the pharmacy to show how it operates safely in the event of a query.

Standard 4.2

- The pharmacy team doesn't routinely provide patient information leaflets for all the medicines it supplies in multi-compartment compliance packs. Instead, people are asked to download them from the internet. This may not be possible for everyone, so some people might not have easy access to the information they need to take their medicines safely.
