### Standards that were met with areas for improvement

#### Standard 1.2

- Team members do not always record any dispensing mistakes, so it may make it harder for them to identify any patterns or trends and take effective action to help prevent any recurrences.

#### Standard 4.3

- The pharmacy generally stored its medicines appropriately. But some medicines are not kept in

their original packs. And the packs they were in do not include all the required information on the container such as batch numbers or expiry dates. This could make it harder for the pharmacy to respond to safety alerts or to date-check the medicines properly.
