Standards that were met with areas for improvement

Standard 4.2

- The pharmacy generates notification letters for a person's usual prescriber to be informed of any medicines that are prescribed by its pharmacist led prescribing service. But it does not routinely send these notifications letters directly to the usual prescriber and relies upon the person to notify them once they have accessed the prescribing service. This means there may be times where important information is not passed on to help with the continuity of care and enable a clinical assessment to be completed to help make sure treatments are safe and appropriate.
