Standards that were met with areas for improvement

Standard 1.1

- The pharmacy team dispensed medicines safely. But some of the SOPs do not reflect the way that the pharmacy dispenses prescriptions using its patient medication record system. This might make it more difficult for team members to work effectively and within current best practice.

Standard 4.2

- The pharmacist gives a range of advice to people using the pharmacy's services. He gives advice

to people taking medicines for the first time including those medicines that require ongoing monitoring and management. He doesn't record the information gathered from the person. So, the pharmacy may miss opportunities to provide additional information when people collect their medicines.

Standard 4.3

- The pharmacy receives alerts for the recall of medicines and medical devices. But it does not keep a record of the relevant action that it takes. This means that the pharmacy may not always be able to demonstrate how it responds to recall and safety notices.
