Standards that were met with areas for improvement

Standard 1.1

- The pharmacy has written procedures to help manage the risks associated with its services. But some of the procedures for prescribing treatments do not match the process, and references are made to the supply of medicines through alternative methods. It's team members have not signed the procedures so they may not be able to show they fully understand their responsibilities.

Standard 1.2

- The pharmacy has not yet undertaken a written audit of its services. So it may not be able to demonstrate its processes are always followed correctly.

Standard 4.2

- The pharmacy uses special packaging which has been validated by the manufacturer to send medicines which require refrigeration. But it has not undertaken its own internal validation of the packaging to help demonstrate it is effective.
- The pharmacy uses additional evidence to verify people's weight or BMI to help ensure they meet the inclusion criteria of the weight loss service. But where information about a person's BMI is not available, the pharmacy does not always have a method to independently verify people's height. So on some occasions they may not be able to show they have a robust method to accurately determine a person's BMI.
