Standards that were met with areas for improvement

Standard 1.3

- Team members generally understand their job roles and their tasks. However, standardised operating procedures do not contain much detail. And the individual steps team members follow when dispensing, checking and dispatching prescriptions are not fully set out. This means that it

would be more difficult to reflect on where improvements could be made if a mistake were made. And the RP may not be in a position to fully exercise their responsibilities, so they can oversee the delivery of the dispensing and supply service as safely and effectively as possible.

Standard 4.3

- In general the pharmacy manages its medicines safely and effectively, but there are a small selection of medicines which have not been packaged and labelled as they should. This means that their packaging may not have all the required information which ensures that they are appropriate for supply.
